

Vessel Risk Dashboard

Data-Driven Insights for Responsible Seafood Sourcing

FishWise is a 501(c)(3) nonprofit sustainable seafood consultancy that works to implement and amplify responsible business practices

HIDDEN SUPPLY CHAIN RISKS

Illegal, unreported, and unregulated (IUU) fishing accounts for 20-30% of global catch, costs billions in lost revenue, and is often associated with forced labor and environmental harm. Yet seafood companies face a daunting challenge in verifying the legality of their fishing sources due to **complex global supply chains** with transparency gaps, **fragmented information**, and a **lack of clarity** on how to interpret and respond to risks.

VESSEL LEVEL ANALYTICS

FishWise's Vessel Risk Dashboard delivers **data-driven insights** about fishing activities by aggregating multiple data sources into a customizable visualizing tool for **actionable supply chain due diligence**.

“As a result of our supply chain due diligence with FishWise, we have bolstered analytical power of traceability data and developed greater mutual trust with both our suppliers and customers.”
- Renee Perry, Vice President, CSR & ESG, Culimer USA

WITH THE VESSEL RISK DASHBOARD, COMPANIES CAN...

Increase transparency at the vessel level and identify areas for strengthening data collection

Assess IUU fishing and social risks with automated dashboard analytics

Verify vessel identities, activities, and authorizations

Receive tailored guidance to interpret risk profiles and enhance due diligence activities
